Baking Instructions

Please Follow for Best Results

Rack Ovens (most desirable - use whenever possible):

Lower oven temperature to 310 degrees at least 15 minutes before baking.

Pan 6 x 4 and let thaw 15 minutes.

Bake for 13 minutes, check for golden edges, and reset timer for an extra 3-5 minutes if necessary.

Cookies should be removed at first signs of slightly golden edges, with the tops still very light and soft.

Some pans may need to be removed before others, depending on cookie type and heat variations within your oven.

***** Suggestion -** To “iron-out” the hot spots in the oven, try opening the door midway through the baking cycle. This lets the oven chamber breathe, allowing for a more even temperature throughout.

Deck Ovens:

The most common problem with deck ovens is over-baked bottoms. Our recommendations are as follows:

Same as rack ovens, except oven temperature should be lowered to 200 degrees at least 30 minutes before baking, then brought back up to 300 degrees when baking begins. This is because the decks hold a lot of heat and take longer to cool down.

***** Suggestion -** Double-pan in deck ovens whenever possible, and at the end of the bake cycle, slide pan liners off hot pans onto a cool countertop to prevent further baking on the pan.

American Gourmet Soft & Chewy Cookies

Every Portion is equal in weight ensuring consistency

Gives off a fresh cookie aroma when baked
